

### *Serval Systems Installs its Back Office Management Solution into Blue Moon Mexican Cafe*

Malvern, Pa. (October 25, 2007) – Serval Systems announces that it has installed its solution, Serval RM®, into the Blue Moon Mexican Café, a popular metro New York area Mexican eatery.

Serval Systems RM® Software provides restaurants, grocery stores, convenience stores, and most other retailers with a quick, efficient and accurate management software solution that gives them complete control over their business' operational and financial management. It is designed to interface and complement most Point of Sale (POS) and accounting systems. Blue Moon Mexican Café ([www.bluemoonmexicancafe.com](http://www.bluemoonmexicancafe.com)) uses RPOWER Restaurant POS and with the pre-established interface between Serval RM® and RPOWER Restaurant POS, data is easily exchanged between the two systems.

“We are very excited about the opportunity to work with Blue Moon Mexican Cafe,” stated Frans van der Merwe, Serval Systems. “They run an excellent restaurant establishment, and we are confident that our software can assist them in managing their back office functions.”

Initial focus will be placed on cash register reconciliation which provides a process for managing cash out functions. Serval employees will work closely with the Blue Moon staff to address any custom requirements. Inventory Management is another key module within Serval RM® and will be used by the staff at Blue Moon to help manage their stock and optimize their order quantities and timing. There is additional functionality within the software that is expected to be rolled out over time.

#### **About Serval Systems**
